

MIMO Techniques in 5/6G (F-js851-3*)

Kaiyuan Bao (kb784, Homerton)

The GitHub repository for this project can be accessed via the following link:
<https://github.com/Bariumoxid/MIMOTechniques>
It includes the weekly meeting notes with Alex from Nokia (in total 23 .docx files), as well as the simulation files, reports, and other materials related to this project.

Project Timeline	Key Workdone and Progress	Key Deadline
Summer Break	Preliminary reading of relevant concepts, including selected chapters of 5G NR: The Next Generation Wireless Access Technology, as recommended by Alex Regular meetings with Alex to discuss the initial project direction and background knowledge	N/A
Michaelmas	Weekly regular meetings with Alex Weekly regular meetings with Albert Began using the MATLAB 5G Toolbox and explored several potential research directions for the project	Hazard Assessment Form
Christmas break	Weekly regular meetings with Alex Developed the initial MATLAB simulation framework Conducted rapid testing and discussed preliminary simulation results during meetings	N/A
Lent	Weekly regular meetings with Alex Weekly meeting with Albert Completed the main simulation programme Carried out initial validation of simulation results against 3GPP industry reports	TMR Report
Easter break	Weekly regular meetings with Alex Began full-scale result collection, using an increased number of simulated frames to improve the reliability and precision of each data point	N/A
Easter	Weekly meeting with Alex Completed final result collection and analysis Wrote and revised the final report	Final Report
